

Contact Tracing

The district will ensure compliance with the [New York State Contact Tracing Program](#).

To assist the local health department with tracing the transmission of COVID-19, the district has developed and maintained a plan to trace all contacts of exposed individuals in accordance with protocols, training, and tools provided through the New York State Contact Tracing Program.

The district will notify the state and local health department immediately upon being informed of any positive COVID-19 diagnostic test result by an individual within school facilities or on school grounds, including students, faculty, staff, and visitors to the district.

The district may assist with contact tracing by:

1. Keeping accurate attendance records of students and staff members
2. Ensuring student schedules are up to date
3. Keeping a log of any visitor which includes date and time, and where in the school they visited
4. Assisting the local health departments in tracing all contacts of the individual in accordance with the protocol, training, and tools provided through the NYS Contact Tracing Program

If/when COVID-19 cases are discovered in the school, the Frankfort-Schuyler Central School District will consult with the local Health Department and the New York State Department of Health. The process for closing school and/or classrooms will be dependent upon many variables such as the nature and size of the outbreak, as well as the number of positive cases, but the following protocols will be considered:

- In the case of an employee testing positive for COVID-19, CDC guidelines will be followed regarding cleaning and disinfecting the building or facility if someone is sick :
<https://www.cdc.gov/coronavirus/2019-ncov/community/disinfecting-building-facility.html>
- Close off areas used by the person who is sick.
- Open outside doors and windows to increase air circulation in the area.

- Wait 24 hours before cleaning and disinfecting. If 24 hours is not feasible, wait as long as possible.
- Clean and disinfect all areas used by the person who is sick, such as offices, bathrooms, common areas, shared electronic equipment like tablets, touch screens, keyboards, remote controls, and copier machines.
- Vacuum the space if needed. Use a vacuum equipped with a high-efficiency particulate air (HEPA) filter, if available.
- Consider temporarily turning off room fans and the central HVAC system that services the room or space, so that particles that escape from vacuuming will not circulate throughout the facility.
- Workers without close contact with the person who is sick can return to work immediately after disinfection.

Confidentiality must be maintained as required by federal and state laws and regulations. School staff should not try to determine who is to be excluded from school based on contact without guidance and direction from the local health department.

For more information about how COVID-19 containment efforts will be communicated to students, families and staff members, please visit the [communication/family and community engagement section of our reopening plan.](#)
